KYAW THIHA

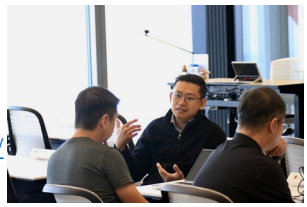
Chief Solution Architect

Singapore Permanent Resident

https://www.linkedin.com/in/k-thiha-99552152/

Email: leokyaw@gmail.com

Mobile: +65 90063530



Accomplished technical leader with over 16 years of experience in business development, delivery and pre-sales specializing enterprise, cloud and virtualization solutions. Proven expertise in GTM, partner alliance, architecting enterprise multi cloud solutions and collaborating closely with global teams, regional teams and partners to drive business transformation through innovative technology solutions. Lead and mentor team of solution architects across the globe and responsible for cloud PL (product line) with HPE Global.

Helping customer directly for more than 12 years and GTM/business developement activity for Open-source based Cloud product and solution (eg. SUSE rancher, RedHat OpenShift, OpenStack, Ansible, etc). As part of HPE Global GTM activities,

- Prepare slide and material for partner, internal sales and pre-sales to reuse
- Prepare competitive information of partner and internal products so reginal GTM and Sales team can use it to have advantage during customer engagement
- Have regular calls wth reginal leaders to understand their technology challanges, resource and skill requirement, then craft the solution to bridge the gaps with customer facing deck, material and enablement of their resource
- Drive global business growth and responsible for Open Cloud product line and reporting back to Senior management

Demonstrated success in managing large-scale, global accounts, with a strong track record of building trusted relationships and leading cross-functional teams to deliver high-impact solutions that meet customer needs and exceed sales targets. Skilled in translating complex technical requirements into strategic business solutions, while leveraging open-source and partner product suite to enhance customer and partner ecosystems.

Adept at engaging senior executives and customers through compelling presentations, whiteboarding, and technical demonstrations. Expertise in the design and delivery of cross-industry solutions that drive synergy in public sector, telecom, managed services, and cloud technologies. Experienced in supporting the entire lifecycle of customer engagements, from pre-sales through to POC execution, hands on solution implementation, technical enablement, day 2 operation and post-sales support.

Proven hands on architecting and delivery experience of

- Understaning the below enterprise solution requirement and hands on experience help me with business, solution and GTM planning
  - multi cloud manager, private cloud and hybrid cloud
  - Virtualization and containerization,
  - automation
  - networking and SDN
  - storage, distributed storage solution and SDS
  - backup, restore and DR
  - centralized logging and centralized monitoring
  - PaaS, IaaS, CaaS
  - DevOps, DevSecOps and CICD
  - software-defined data centre architectures (Everything-as-a-Service, Infra-as-Code, heat template)
  - SDN and cloud networking (Neutron, Cisco ACI, Juniper, etc)
  - Backup and DR (CommVault, Veeam, etc)
  - Cloud native (OpenShift, DCOS, Docker, Kubernetes, workload migration and containerization)
  - Security (Kubernetes & OpenShift security, Data security, Identity and Access Management, Compliance, Incident Response, Visibility, Logging and Monitoring)

I am looking forward to talk to you to discuss around my experience, skillset and how I can contribute/success in this roles.

Professional Experience

Principal Technical Account Manager
Red Hat Asia Pacific Pte Ltd (June 2024 – Dec 2024)

Responsibilities

- Lead a team responsible for supporting Singapore's Ministry of Defence and Ministry of Home Affairs across multiple Red Hat products, including OpenShift, OpenStack, and Ansible Automation Platform.
- Collaborate closely with Account Executives, Solution Architects, and Customer Success Executives to drive customer success and expand product adoption.
- Manage account planning, focusing on product subscription upsell and operational onboarding, ensuring seamless product positioning and customer engagement.
- Facilitate workshops and regular customer meetings to discuss product strategy, operational performance, and roadmap alignment, achieving monthly business objectives.
- Guide cross-functional teams to optimize customer experience and ensure successful implementation across various Red Hat technologies.

OpenCloud Practice Lead & Chief Architect, Global Competency Center
Hewlett Packard Enterprise (January 2020 – June 2024)

Responsibilities

- Led Cloud infra and platform solution architect and business development team across the globe
- Directed global pursuit activities for large enterprise customers, crafting solution strategies, proposal preparation, and presentations to win multi-million-dollar contracts. including
  - Proof of Concept
  - Discovery session
  - High level and low level design
  - Solution proposal submission
- Prepared delivery team formation and led the project delivery
- enabling partners to grow their practices through ongoing support and capability-building.
- Developed comprehensive joint business plans with global partners, focusing on driving GTM strategies and expanding market penetration within the hybrid cloud and container technologies space.
- Successfully built and nurtured strategic alliances with System Integrators and global partners (GSIs), ensuring mutual business growth and positioning HPE as a preferred technology partner.
- Coordinated co-marketing initiatives including joint webinars, events, and content creation, significantly increasing brand visibility and partner-generated leads.
- Led business development activities, collaborating with partner executives and internal sales teams to create joint industry solutions, tailored for specific market segments.

Cloud Architect, APAC Emerging Tech Practice
Red Hat Asia Pacific Pte Ltd (November 2018 – January 2020)

Responsibilities

- Collaborated with product teams to design cloud architecture and deliver cloud solutions to customers, contributing to regional GTM efforts.
- Worked closely with partners to integrate Red Hat solutions into their broader offerings, leading to enhanced partnership synergy and customer satisfaction.
- Developed and delivered training and enablement sessions for partners on container technologies and multi-cloud management platforms.
- Supported the business development team by identifying new opportunities for solution expansion and helping partners optimize their cloud and containerization solutions.

Cloud Solution Lead, APJ Centre of Excellence
Hewlett Packard Enterprise, Singapore (December 2014 – October 2018)

Responsibilities

- Served as the APJ lead for hybrid IT management and container platform solutions, driving business growth through strategic partner engagements.
- Managed the development of cloud solutions and partner enablement, ensuring partner teams were well-equipped to promote and implement the technology in customer environments.
- Evaluated partner performance, ensuring alignment with business goals and adjusting plans to overcome challenges and achieve targeted results.
- Coordinated cross-functional teams to ensure seamless integration of partner solutions into HPE's overall offering.

Advanced Systems Engineer/Developer, High Performance Computing
Novaglobal Pte Ltd, Singapore (December 2008 – November 2014)

Responsibilities

- Led technical initiatives and partnerships, managing high-performance computing (HPC) projects and providing technical direction on system integrations.
- Developed cloud portals and bioinformatics web services, enhancing partnerships through innovative solutions.

Key Solution Development & Leadership Initiatives

- Developed and led global business strategy for multiple hybrid cloud solutions, successfully positioning products in key markets and expanding partner capabilities.
- Worked with partners to drive large-scale cloud implementations for global telcos, integrating Red Hat and HPE solutions into cloud-native environments.
- Led the migration of SAP customers from SUSE to Red Hat, fostering significant business growth and partner success.

Technical Skills & Expertise

- Strategic Partnerships & Alliances
- Go-to-Market Strategy
- Business Development & Sales Enablement
- Partner Relationship Management
- Cloud Solutions Architecture
- Hybrid IT & Multi-Cloud Management
- Cross-Functional Collaboration & Leadership
- Technical Enablement & Certification Programs
- Global & Regional Business Planning
- Executive Relationship Building

Public Messaging as Chief Architect

Build your private cloud with OpenStack and HPE solutions and services

Qualification

BSc (Hons) in Computing & Software Engineering (6th June 2007)
Oxford Brookes University (UK)

Appendix

Cloud Implementation

Cloud implementation for Thailand Telco (HPE, 2023)

Description : Customer is building end-to-end cloud-native OSS/BSS by using cloud solution. They have multiple telco appliance vendors to host on next gen cloud

Technologies : Cisco Infrastructure Manager, Red Hat OpenShift Platform, Red Hat OpenStack Platform, SRIOV, huge page, heat automation template, Cisco ACI, Ceph, VNF

Role

- Chief architect & cloud platform delivery lead
- Implement and performance tuning of cloud infrastructure
- VNF onboarding and automation template creation
- Troubleshooting of infrastructure integration issue and operation support

Cloud implementation for Vietnam Telco (HPE, 2023)

Description : Customer is building the cloud platform to host their big data workload. They requested to help with design and architecture refresh of existing cloud platform and VM onboarding across different DC/cloud platform.

Technologies : OpenStack Platform, SRIOV, huge page, Cisco ACI, Ceph, Kafka,

Role

- Implement and performance tuning of cloud infrastructure
- VM onboarding
- Performance evaluation

Cloud implementation for Leading Telco, Tokyo (Red Hat, 2019)

Description : Customer is building the world's first end-to-end cloud-native mobile network. Customer is using cloud solution for their core and edge infrastructure. They have multiple cloud implementation across different regions and hosts VNF appliances.

Technologies : Cisco Infrastructure Manager, Red Hat OpenStack Platform 13, SRIOV, huge page, heat automation template, Cisco ACI, Ceph, VNF

Role

- Implement and performance tuning of cloud infrastructure
- VNF onboarding and automation template creation
- Troubleshooting of infrastructure integration issue and operation support

Private Cloud implementation for an South-East Asia Government (HPE, 2018)

Description : Customer wants to migrate existing workload to private cloud which will be running across two data centres. Automation and customization of cloud instances using Chef

Technologies : Helion OpenStack 5.0 (OpenStack Newton), Hyper-V, Chef Automation, HPE 3PAR and HPE virtual connect

Role

- Conduct design workshop to architect the solution and lead project delivery team
- Prepare formal design document, scope of work, project schedule and quotation

Cloud implementation for Government Bank, Thailand (HPE, 2016)

Description : Customer wants to migrate existing VMware workload to multi-site cloud platform. Multi-tenancy and workload staging segregation is designed and implemented

Technologies : HPE CloudSystem Enterprise, OpenStack Juno and Helion Development Platform (Cloud Foundry), Database as a Service, VMware, HPE 3PAR and HPE virtual connect

Role

- Lead the delivery team
- Conduct discovery session and design workshop

Government Cloud in Australia (HPE, 2016)

Description : Customer wants to have a multi-site cloud system with HA/DR capabilities, billing and performance monitoring features on a private cloud.

Technologies : HPE Cloud Service Automation, HPE Operation Orchestration, HPE CloudOptimizer, HPE Business Analytics, MySQL, HPE Vertica and VMware

Role

- Lead the delivery team
- Architect the solution and present to customer
    - Architect the solution because base products are not supported for DR/HA
    - Involve in network design (GLB, LB, DNS, etc) and hypervisor configuration

Cloud implementation for New Zealand Internet-auction company (HPE, 2015)

Description : Cloud system to host workload for development, production portal and services
Technologies : HPE CloudSystem Enterprise, OpenStack Juno, RedHat Virtualization
Role

- Implement PoC system single-handedly
- Prepare scope of work, project schedule and quotation

NUS HPC Cloud (NovaGlobal, 2012)
Description : First production HPC cloud implementation. Self-Service Cloud portal, with pay-per-use chargeback system, manages self-provision of bare metal, HPC cluster and multi-OS dual boot.
Technologies: Adaptive Computing Softwares (MOAB and ViewPoint), Torque, GOLD accounting system, BASH, JAVA, JSP, Servlet, AD authentication, javascript, HTML, SFTP
Role

- Involve in system implementation, integration and engineering
- Reverse engineer and customized commercial software workflow by decompiling, injecting customized code and compiling of jar file
- Web UI development and modification

Achievement

Red Hat Certified System Administrator in OpenStack	Cert ID: 190-051-938
Red Hat Certified System Administrator in RHEL	Cert ID: 190-051-938
Red Hat Certified Specialist in Virtualization	Cert ID: 190-051-938

High Performance Computing Projects

- **NTU HPCC Data Centre**, 300 x IBM servers running on RedHat, Windows and Hybrid. I was assigned as on-site engineer for 6 month
  - **It was standing at 267 in world top 500 supercomputer and datacentre by March 2009**
  - Also involve reverse engineering and customization of Accelrys Material Studio (it is commercial software and running on single user mode) to make it run on multiple user mode for billing and reporting purpose
- Setup Big Data (Data Analytics System) for **Indonesia government**
- Setup 50 nodes HPC cluster for **Genome Institute of Singapore (A*Star)** using IBM xCAT, LSF scheduler, Ganglia and LDAP
- Setup cluster for School of Mechanical Engineering, **Nanyang Technological University** which comprised of IBM xCat, Torque, Intel C/C++ compiler, Intel Fortran compiler, Materials Studio.
- weather forecasting system for **Singapore national defence research agency** which is
  - develop whole process with Linux bash
  - download raw data from file server
  - preparation to processes the data
  - running COAMPS with prepared input
  - post-processing to generate matrices and graphical format
  - upload to webserver and display on webUI
- Setup HPC Cluster for **School of Physics and Mathematical Science, Nanyang Technological University** and provide support for IBM xCAT, SGE, OpenMPI, Ganglia
- Extend 5 nodes for HPC cluster for **Department of Electrical & Computer Engineering, National University of Singapore** using IBM xCAT, Torque, Ganglia.
- Compile and install GNU Octave (Opensource software as a replacement of MatLab), compile with OpenMPI, for **School of Chemical and Biomolecular Engineering, Nanyang Technological University.**
- Setup data centre server cluster **for Department of Mechnical Engineering, National University of Singapore** using IBM xCAT, Torque, Ganglia.
- Setup HPC server cluster for The **Singapore-MIT Alliance for Research and Technology (*SMART*)** Centre in their data centre
- Designed and implemented load balanced high availability system infrastructure for **National University of Singapore** BioPortal project
- Compiled Bioinformatics software for **National University of Singapore** Bioportal project.
- Storage cloud and Infrastructure cloud implementation for **National University of Singapore**
- Involved in Data Analysis Projects (implement IBM InfoSphere BigInsights and IBM Platform Symphony)
- Deploy IBM Platform HPC, IBM Platform Cluster Manager, IBM Platform Application Centre
- Support for
  - Department of Chemical and Biomolecular Engineering (NUS)

- Department of Electrical and Computer Engineering (NUS)
- HPC, Grid Computing System, IaaS Cloud System and Web Portals, Computer Center (NUS)
- High Performance Computing Center (NTU)
- School of Electrical & Electronic Engineering (NTU)
- School of Chemical and Biomedical Engineering (NTU)
- Bioinformatics Research Centre (NTU)
- School of Computer Engineering (NTU)

Web Development Projects

HPC BioPortal, National University of Singapore (2009)
https://hpcbio.nus.edu.sg
Description : Web portal which hides the complexities of Linux and resource scheduler. Users can execute HPC Bioinformatics jobs from Web UI, instead of typing complex HPC and Linux command
Technologies: GridSphere Framework, Java Portlet, Servlet, JSP, LDAP/AD, LSF, JSCH, SFTP, CentOS5.2, Shell script, JavaScript, Tomcat, MySQL, Ant, Linux user impersonation
Role
Develop single-handedly
Investigate customer requirement and discuss with colleague scientist to develop web UI for generic applications (Autodock4, AMBER, Gaussian, MODELLER, NAMD, CHARMM, GROMACS, FastDNAml, Phase, Clustalw-MPI, FastA, MAST, MEME and Muscle)
Running & submitting users' jobs under their **impersonated process** Ids securely from portal for billing purpose
Develop Web based File Browser/Manager for Linux file system (Windows Explorer alike) with Linux file system level authorization, files & folders permission (with user impersonated process). User can create, edit, delete, refresh, zip, unzip, change file format(dos2unix), upload, download, cut, copy, paste files and folders
LSF Job Manager which displays a list of LSF(Linux HPC Resource Manager) jobs that have been initiated from the application submission. It allows user to monitor the progress of application jobs. When a new job is launched, it is automatically added to the list in the job manager.
Centralized Authentication (Active Directory)
UAT, documentation & maintenance
